

In the **winter** the **sun rises later** and sets earlier and our **days are short**.

In the **summer** the sun **rises earlier** and sets later and our **days are long**.

Why do we need to know this?

It helps us plan what we need to do in each day.

People who work outdoors need to know how much daylight they will have in each day, such as farmers and gardeners.

We have to take more care walking to school or home in the dark.

We have to choose after school clubs carefully
(You can't play football matches in the dark!).
