

Cave Paintings

Most cave paintings were of animals or hunters. A cave could be full of many paintings by many different painters. Many hand stencils have also been discovered.

They used natural colours from mineral pigments.

Some of the most impressive cave paintings have only been found in the last 100 years. There could be more out there we don't know about!

Cave Paintings

This cave was discovered in 1880 in Spain. The carbon dioxide breathed out by visitors who were eager to see the cave paintings caused damage to the paintings and the caves were closed.

Magura Cave

This cave is located in north-western Bulgaria. Bones from different prehistoric species of bears and hyenas have been discovered in the Magura Cave. Some of the paintings decorating the walls date back to the Neolithic period.

Chauvet Cave

Located in Southern France. In addition to the paintings and other human evidence, the three **speleologists** who first explored it also discovered fossilised remains, prints, and markings from a variety of animals, some of which are now extinct.

Speleology = the scientific study of caves

Hand Stencils

Cave Paintings around the world often include hand stencils, impressions left by blowing paint around the hand.
