

The water cycle

a) Add the key words to the diagram: condensation precipitation
evaporation groundwater flow surface run off transpiration
b) Draw on transpiration.

Extension: Explain how the water moves from sea, air and land and back.

Key words

evaporation condenses groundwater flow precipitation
surface runoff sea

Firstly the water starts off in the _____ it then is transferred to the air by the process of _____ this is when the sun heats the water and it turns into water vapour. The water vapour then cools and _____ to form clouds and falls as _____. The precipitation then goes back to the sea either by _____ or _____.
