

## **Year 5 Home Learning**

**Wednesday 3<sup>rd</sup> February 2021**

### **Science**

During historical times of great exploration, such as the Victorian era, scientists needed to document the new types of plant life that were being discovered. This was a time before cameras and the internet so instead they used botanical drawings. These are similar to the still life drawings we have looked at in your art lessons and were designed to be as accurate as possible so that they could be studied in the same way that we might look at a photograph today.

Do you see how detailed they are?

I would like you to find a plant, either in your house or garden or anywhere else and try to draw it using the same style. Remember that you should be making your drawing as detailed and realistic as possible.
